GENERAL CHEMICAL CORP.

Mold Cleaner DP-4-T-L

Mold Cleaner

TYPICAL PROPERTIES

• Appearance: Clear to light amber liquid with a mild amine odor

Description

MOLD CLEANER 4-T-L is a solvent blend for removing urethane residue from molds. MOLD CLEANER 4-T-L is non-chlorinated, non-carcinogenic, and non-ozone depleting. MOLD CLEANER 4-T-L is an excellent replacement for solvents such as methylene chloride and 1,1,1-trichloroethane in cleaning polyurethane mold build□up. MOLD CLEANER 4-T-L is much safer and friendlier to the environment than these solvents. It can be used for extended periods as it tolerates high resin loading and has a very low evaporation rate. DP-4-T-L is a thickened version of DP-4-L.

Recommended Application

1. Wipe surface clean of any loose debris or dirt.
2. Apply DP-4-T-L with a brush to the areas in need of cleaning.
   Allow DP-4-T-L to solvate the resins (most materials take 20-30 minutes). The longer DP-4-T-L is in contact with the resins, the more DP-4-T-L will solvate the resins.
3. Wipe tooling surface clean with a rag or steel wool and solvent.

Benefits

• For the polyurethane molding industry, removes built-up of polyurethane residue from metal molds
• Safe to use on all metallic molds
• Low vapor pressure
• High flashpoint
• Non-corrosive
• Effective at ambient temperatures
• Added citrus fragrance

Health & Safety

Please refer to SDS for complete health and safety information.
