

FoundryGeneral® Mold Release 007H

Aerosol Release Agent

Description

FoundryGeneral® Mold Release 007H is a specially formulated aerosol mold release for use in various Cold Box core making processes. It provides excellent releases on aluminum, urethane, and metal core boxes.

Recommended Application

- 1 Inspect core box to insure that it has been adequately cleaned.
- 2 FoundryGeneral® Mold Release 007H is used as received.
- 3 Spray a uniform light coat of FoundryGeneral® Mold Release 007H into the cavities.
- 4 Frequency of application will depend upon core complexity and condition of the tooling.

Benefits

- Provides multiple releases
- Minimum release film build-up
- Nonchlorinated
- Convenient spray can
- Ready to use

Material Compatibility

Product is extremely flammable. Keep from all ignition sources. Avoid heat, sparks and open flames. Avoid strong oxidizing agents (i.e. bleach).

Health & Safety

Please refer to separate SDS for complete health and safety information.

Application

The application interval should be such that release film buildup is minimal.

TYPICAL PROPERTIES

- Appearance and odor = Clear, colorless to light amber liquid
- pH = NA
- VOC (EPA 24) = Not determined
- Density = 5.6 lbs/gal
- Flashpoint = 0 °F

SHIPPING

FoundryGeneral® Mold Release 007H is shipped in a case. Each case contains 12 aerosol based cans.
